Individual Contributions Breakdown

Yean Fong

- Prepared the goals, system requirements, and analysis, and contributed to the actors and goals section during the early project stages.
- Captured prototype screenshots, formatted and combined sections of the first report, and prepared the project management section, including the Gantt chart, team responsibilities, and references.
- Wrote the algorithms and data structures, user interface design and implementation, and design of tests sections for the second report.
- Updated project coordination materials and the plan of work, reviewed the report, and helped maintain consistency across the team's documentation.
- Organized the Demo 1 GitHub e-archive and documentation, prepared the project brochure, and compiled the individual contributions report.
- Presented the problem, project scope, Phase 0 progress, and next steps during Demo 1.

Doungkhe Neang

- Researched Cambodian government-service information and contributed to the problem breakdown, glossary, and actors and goals sections.
- Helped coordinate team responsibilities, gather contribution details, and check consistency between parts of the second report.
- Presented Demo 1 material on data collection, monitored government websites, and the current knowledge base.

Sereyprophea Sarin

- Worked on the customer problem statement and stakeholders section, and helped review requirements, documentation, and QA-related content.
- Updated the project plan, milestones, deadlines, and schedule during the second report.
- Presented the web and Telegram interfaces and demonstrated the main user-facing functions during Demo 1.

Phallamonunhh Chun

- Worked on the technical prototype, including AI and retrieval-augmented answering, and provided technical input for system requirements.
- Prepared use case descriptions, the use case diagram, and fully dressed use cases for the first report.
- Contributed interaction diagrams and class/interface specifications, and revised the system architecture documentation for the second report.
- Presented the system architecture, technology stack, answer safety pipeline, and refusal handling during Demo 1.

Bunkheang Heng

- Worked on the web/API prototype, system architecture, database, and integration-related development.
- Prepared the traceability matrix and system sequence diagrams for the first report.

- Documented subsystems, UML package diagrams, architectural styles, and hardware mapping for the second report.
- Presented unit testing, test coverage, a verification test example, and the continuous integration workflow during Demo 1.

Heejae Choi

- Worked on the prototype user interface and UX/UI design, and prepared the preliminary design and user effort estimation sections.
- Documented system connectors, network protocols, and other architecture specifications for the second report.
- Added integration test files and related documentation to GitHub for Demo 1.
- Presented integration testing, API route checks, and evaluation results during Demo 1.

Project Management

a. Project Coordination and Progress Report

For Demo 1, the team prepared a working SuperAsk.AI prototype with web chat, a Telegram bot and Mini App, Khmer and English support, source citations, and refusal safeguards. The demonstration also covers unit testing, integration testing, evaluation, and the current knowledge base.

Yean coordinated the submission materials and GitHub documentation. Prophea supported planning and presented the user-facing demonstration. Doungkhe supported contribution tracking and presented the data collection and knowledge base. Monunhh, Bunkheang, and Heejae covered the architecture, unit testing, and integration testing respectively. The presentation reflects each member's assigned topic; this does not necessarily establish authorship of every related code file.

b. Plan of Work

Period	Planned Work	Milestone
Oct 22–Nov 1	Continue system development and prepare testing and documentation for the first demo.	Demo 1 implementation
Nov 2–8	Review the web and Telegram prototype, evaluate retrieval and refusals, prepare presentation and archive documents.	Demo 1 preparation
Nov 9	Present the working prototype and submit the e-archive materials.	Demo 1
Nov 10–16	Review Demo 1 feedback; work on retrieval ranking, source coverage, and interface improvements.	Report 3 Part 1 (Nov 16)
Nov 17–23	Continue testing and documentation; review consistency between the implementation and reports.	Full Report 3 (Nov 23)
Nov 24–Dec 3	Address remaining issues and prepare the final system demonstration.	Final refinements
Dec 4	Present the final system.	Demo 2

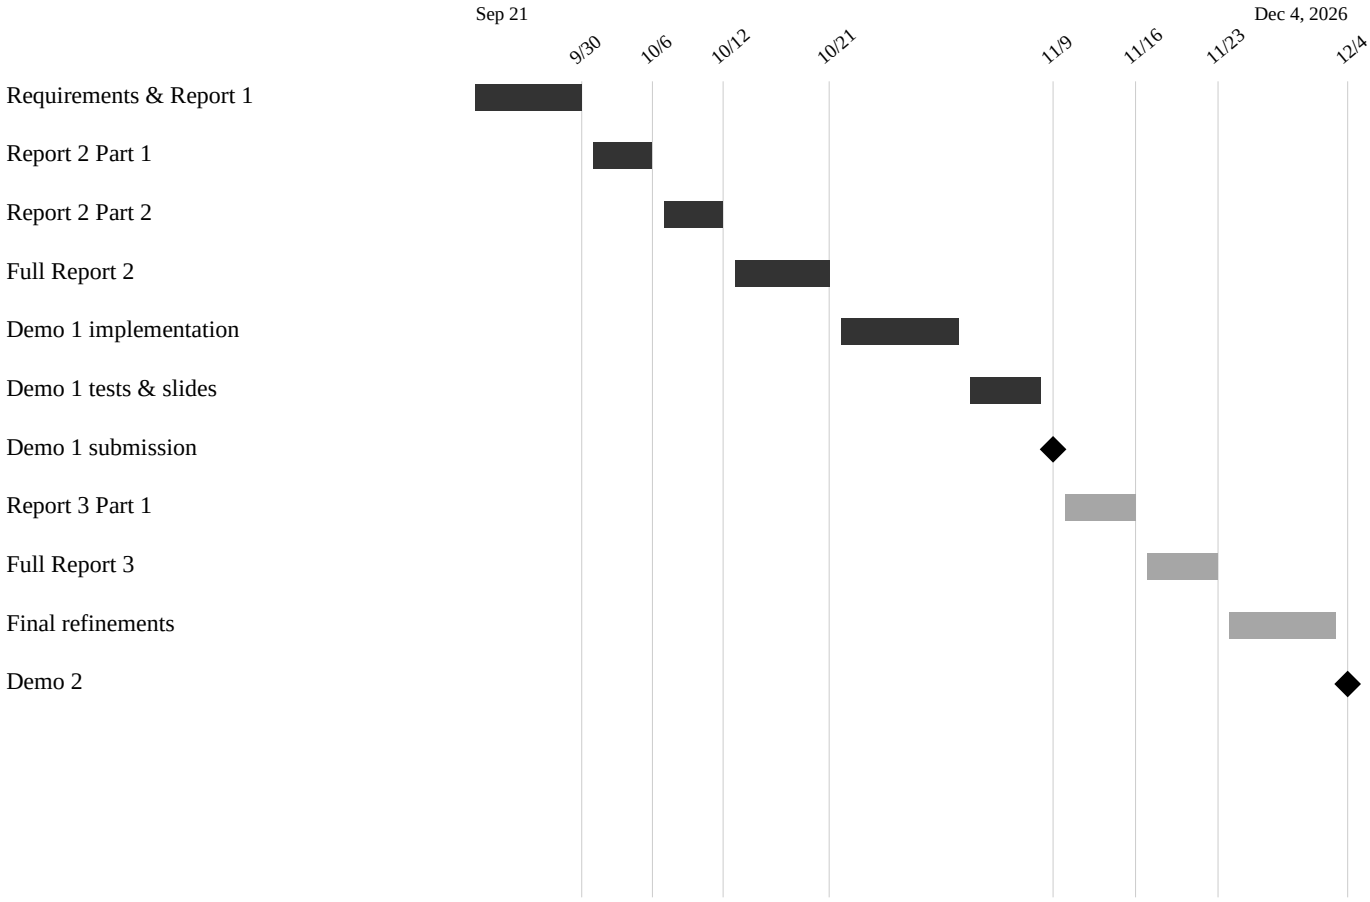
c. Team Responsibilities

The table updates the roles in Full Report Two for Demo 1 and the remaining project period.

Member	Role	Current (Demo 1)	Future (after Demo 1)
Yean Fong	Project Lead	Coordinate the archive and documents, update the Gantt chart, prepare contribution report and brochure, present the opening and conclusion.	Monitor deadlines, coordinate reports and integration of final documentation for Demo 2.
Phallamonunhh Chun	AI/ML Engineer and System Design	Present system architecture, answer pipeline, model selection, and safety mechanisms; support technical documentation.	Improve retrieval and answer reliability; update technical designs as implementation changes.
Bunkheang Heng	Web/API Developer	Present unit tests, coverage and continuous integration; support the working web and backend prototype.	Resolve backend issues, improve authentication and integrations, and support final testing.
Doungkhe Neang	Data/Content Curator	Present collection of official-source information and the current knowledge base; support coordination of contributions.	Expand and check approved source content, supporting future coverage and content review.
Sereyprophea Sarin	QA/Testing Lead	Present the web and Telegram user workflow and live demo; support task planning and milestone tracking.	Support usability checks, verify fixes and help coordinate final demonstration testing.
Heejae Choi	UX/UI Designer	Present integration testing and evaluation; provide separate integration test files and test documentation.	Improve user experience and responsive/bilingual interface based on feedback; support integration checks.

d. Gantt Chart – Updated for Demo 1 (November 9, 2026)

This chart updates the project timeline from Report Two. The date marker is November 9, 2026; subsequent activities remain planned through the final demonstration on December 4.



Dark bars: completed/current through Demo 1. Light bars: planned work after Demo 1.
