Guide to the web chat, Telegram bot and Mini App

CSCI 441 – Software Engineering

Team AO3 | Demo 1 | November 9, 2026

Team members: Yean Fong, Phallamonunhh Chun, Bunkheang Heng, Heejae Choi, Sereyprophea Sarin, Doungkhe Neang

Project: SuperAsk.AI – AI-Powered Government Service Assistant

Codebase reviewed: Super-ask repository ZIP provided for Demo 1.

1. About SuperAsk.AI

SuperAsk.AI is a prototype assistant that helps people ask questions about Cambodian public-service procedures in Khmer or English. It can show answers with references to source documents when relevant information is available. It can also say when it cannot find enough support to answer.

Important: SuperAsk.AI is a student prototype, not a government office. The current knowledge base includes sample and not-yet-officially-approved material. Always check the original ministry source before acting on fees, deadlines, requirements or other important instructions.

2. What you need

• An internet connection and a recent web browser on a phone, tablet or computer; or the Telegram app.

• No account is required to use the prototype chat. The visible login and registration screens are not full account authentication.

3. Use SuperAsk on the website

Website: https://superask.vercel.app

Step 1. Open the website in your browser.

Step 2. Select the chat feature (or go directly to https://superask.vercel.app/chat).

Step 3. Type one government-service question in the message box. Example: “How do I renew my driving licence?”

Step 4. Select the send button and allow the response to load.

Step 5. Read the answer and check the attached source details. When shown, the source card provides information such as the ministry, document, dates and a link to the original source.

Step 6. Open the source link to verify the information on the official site. If the information appears incomplete or outdated, verify it directly with the relevant office.

4. Ask in Khmer or English

The site offers a Khmer/English language control. You may ask questions in either language, and the answer engine is designed to reply in the language of the question. To change the interface language, use the language switch near the top of the site.

For best results, ask a focused question about a specific service. For example, ask about vehicle registration, a driving licence, a birth certificate, a trademark, or a consumer-finance matter. Coverage remains limited; questions outside the available materials may be declined.

5. Understand the answer and its citations

• **Answer:** The main text gives the available information for your question.

• **Source cards:** When supporting passages exist, source information is displayed separately from the answer. Look at the issuing institution, document name, review/freshness details and link.

• **Decline:** If a question is outside scope or sources are insufficient, SuperAsk may refuse rather than guess.

• **Feedback:** Where available, use the feedback or report option to flag an unhelpful or incorrect response.

A source being linked in the prototype does not mean the content has received formal ministry approval. If you need a legal decision, official fee confirmation or emergency help, contact the responsible authority.

6. Use the Telegram bot

Telegram bot: @superask168_bot

Step 1. Open Telegram and search for @superask168_bot.

Step 2. Open the bot chat and follow the on-screen Start prompt, if shown.

Step 3. Type a government-service question and send it as a regular message.

Step 4. Read the bot's response and any source information it provides.

Step 5. To use the Mini App, select the SuperAsk button or menu entry in the bot, when available. The same web-style chat appears inside Telegram.

The bot and Mini App share the same core answer engine as the website. The current prototype may not consistently remember earlier Telegram messages across server restarts, so repeat the procedure name if a follow-up question is misunderstood.

7. Conversations and controls

• **New conversation:** Use the new-chat control to begin another topic.

• **Recent conversations:** The web chat supports browsing earlier conversations from the sidebar; on smaller screens, open the menu to view it.

• **Clear or delete:** The sidebar provides controls to remove conversations or clear saved history.

Avoid sending personal identity numbers, passwords, private financial information or confidential documents through a student prototype.

8. Common issues

Issue	What to try
No answer or a decline	Rephrase with the exact procedure and ministry. The source may not yet be covered.
Answer seems outdated	Open the official source link and confirm current requirements with the ministry.
Telegram bot does not respond	Check internet access; try the website; verify that you opened the correct bot.
Wrong interface language	Use the Khmer/English switch; ask a complete question in your preferred language.
Conversation context is lost	Repeat the earlier procedure name, especially in Telegram.
Page not loading	Refresh the page or retry later. The prototype deployment may be temporarily unavailable.

9. Current coverage and limitations

The Demo 1 materials describe a limited knowledge base covering selected topics in transport, civil registration, trademarks and consumer finance. It does not cover every Cambodian government service. Real user accounts, expanded approved content, a ministry content portal and stronger retrieval are planned improvements, not completed user features.
